

## Potential side effects associated with vortioxetine (Trintellix®)

### Incidence of adverse events in studies of vortioxetine 20 mg in persons with major depressive disorder

Common side effects*	Drug-placebo difference	Percentage of patients on vortioxetine who reported it	Percentage of patients on placebo who reported it
Nausea	23%	32%	9%
Vomiting	5%	6%	1%
<b>Other side effects**</b>			
Constipation	3%	6%	3%
Abnormal dreams	2%	3%	1%
Pruritus	2%	3%	1%

Adverse (undesirable) events that occurred during treatment with vortioxetine are considered here to be side effects if they occurred *at least* twice as often as on placebo. A side effect is considered here to be “common” if the difference between its incidence on the drug and on placebo is at least 5%. Other side effects included in this handout are those for which the difference between its incidence on the drug and on placebo is at least 1%.
